BIORS LLC

We develop, manufacture, sell and provide further support for medical intelligent equipment allowing donosologic rapid diagnostics. The quality of our equipment we produce is confirmed by the certificate ISO 13485.

We work for clinics and private practitioners, spas and gyms, hotels and health resorts, pharmaceutical companies and pharmacies.

Current and potential partners are our distributors in regions and abroad.

Medical innovative technologies
for safeguarding health

Hardware and software complex (HSC) Bioscanner Wellness is a complex for donosologic rapid diagnostics. It combines classical methods of clinical examination and intelligent software developed by doctors and programmers of our company.

The purpose of creating our device was to obtain a combination of the following advantages:

- **reliability** (all tests are established classical diagnostic techniques);
- **light weight** (4.85 kg);
- **simplicity** (working with Bioscanner does not require high skill level of operator; it can be operated by a nurse, gym instructor, trainee, or even an assistant who is not directly related to medical care);
- **autonomy** (the device does not require stable internet connection);
- **mobility** (dimensions are 40 × 30 cm);
- **accuracy** (clinical trials are performed; strong correlation is confirmed by the Russian Military Medical Academy);
- **full-body pre-clinic classic diagnostics** (equivalent to five standard methods of donosologic check-up);
- **high technologies** (data mining performed by the software and summarizing of integral analysis results);
- **speed of examination** (full-body health check-up takes 10 minutes on average).

Medscanner performs the following tasks:

1. Rapid and reliable assessment of patient body condition; detection of disorders in different organs in the early stages, before signs of disease appear.
2. Individualized selection of therapeutic or rehabilitative measures; health status monitoring during the treatment process.
3. Identification of the causes of overweight, selection of weight loss program, diet efficacy assessment, calculation of individual physical activity level.

How the device works

Conducting the examination is just the fixation of electrodes and sensors on a patient's body according to program explanatory images and pressing the Start button.

The device carries out all measurements automatically, software performs integral analysis of obtained data. Results are displayed as diagrams, text reports and visual images. All reports can be printed directly by the printer or sent by e-mail.

Advantages of the device

Bioscanner can substitute for all equipment for a basic health check-up. The device combines many full science-based diagnostic techniques, realized in individual devices such as electrosonatograph, electrocardiograph, pulse oximeter, photoplethysmograph, and bioimpedance analyzer.

- Full automation and simplicity of examination make it possible to involve unskilled health workers. It allows a quick replacement of operator of Bioscanner in case of unforeseen situations, without loss of diagnostic quality.
- Free software and updates throughout the lifetime of the device.
- System integral analysis not only of separate organs state, but also the body as a whole.
- Detection of disorders in different body organs and systems even in the early stages, before signs of disease appear.
- Internet connection is not required for device operations. Bioscanner is completely autonomous.
- Full-body screening takes 15 minutes.
- All methods of diagnostics with use of our device are established diagnostic techniques of evidence-based medicine.

Economy of money

- For purchase of medical equipment. You pay for one device and get capabilities of four machines.
- You do not need to pay rent for several offices to place several devices. In order to organize a medical office, one room from 3 m² is required.
- Investments in salaries of hired medical staff. Only one nurse is required for operation of one device, not several nurses and a doctor, usually required to perform standard diagnostic procedures and give medical opinion on a patient's health and treatment.

time

- Full-body preclinical diagnostics including a conclusion about the health condition takes from 15 minutes.
- A possibility to reduce time for starting a medical office up to 1-2 days.

BIORS medical equipment is exported to a number of foreign countries, such as China, Vietnam, Romania, Israel, Belarus, Ukraine, Kazakhstan.

We give to all our distributors a substantial discounts, and possibility of instalment payments up to 6 months, depending on number of purchased devices.

Software is translated to English and China. A recent software version is available for download free of charge on our website www.bioscaner.com.

We export our hardware and software complex to Customs Union countries under TP TC 020/2011 EAC certificates.

In the countries of the European Union, our equipment is supplied under the brand name “Bioscanner Wellness”, and has a **CE-mark** according to the received European certificate.

As an original equipment manufacturer, we can export our devices as OEM motherboards under other brand names.

117292 Moscow
Russia

Product:

Hardware-software complex Bioscanner Wellness

Type:

Bioscanner Wellness

Specifications:

the product specification is given on the other side of the certificate

This conformity certificate confirms the conformity of the product with essential safety requirements
of the following EC/EU New Approach Directives as amended:

2014/30/EU Electromagnetic compatibility

Harmonized standards used for conformity assessment:

EN 55014-1:2017
EN 55014-1:2017/A11:2020
EN 55014-2:1997
EN 55014-2:1997/AC:1997
EN 55014-2:1997/A1:2001
EN 55014-2:1997/A2:2008

The certificate has been issued on the basis of the tests of the product type sample.
The results are recorded in the Conformity assessment report No. 210500045 dated 24.02.2021

mark can be used only in the case of conformity assessment according to all relevant EC/EU Directives.

This certificate is issued under the following conditions:

1. The certificate applies to the product type specified in the above mentioned Conformity Assessment report.
2. The production process/factory production control is not covered by this certificate.
3. The certificate does not imply that the certification body has performed any surveillance or control of the production process.
4. The manufacturer shall ensure the conformity of subsequent production items with the certified type.
5. Changes that may have an impact on maintaining conformity with the certification requirements may require confirmation of the validity of the certificate by demonstrating compliance with the conditions under which the certificate was issued or by conducting an additional evaluation.
6. The holder of this certificate must keep the conditions specified in the General Rules for Product Certification, which are freely available at www.tsu.eu.

Medical innovative technologies
for safeguarding health

We love our work a lot, and we greatly appreciate our potential customers who are interested in our developments.

Therefore, we are always open to close and flexible cooperation. For your first batch we offer to discuss special conditions to establish long-term relations based on mutual trust.

We are ready to adapt our products to foreign markets.

We hope for long -term cooperation!

Best regards, Team of BIORS LLC
